IMAGE BASED INFRASTRUCTURES

SOUNDS VERY 1980 BUT WORKS VERY 2010

HOW TO

- → IF YOU EVER INSTALLED AN OS AND CUSTOMIZED IT YOU ALREADY KNOW HOW TO BUILD IMAGES
- → ONCE YOU HAVE BUILT AN IMAGE YOU ARE NOT ALLOWED TO MAKE CHANGES TO IT

CONFIG FILES VS DATA

listen_on = xx.xx.xx.xx:yy

ADVANTAGES

- → FORCES YOU TO THINK STATELESS (GREAT TO SCALE)
- → BEST REPEATABILITY YOU'LL EVER GET
- → HIGHLIGHTS DEPENDENCIES LIKE NOTHING ELSE
- → BRINGS PEOPLE TOGETHER
- → IT'S A WET DREAM FOR ANYBODY DOING COMPLIANCE STUFF

PAIN POINTS

- → IT'S HARD FOR PEOPLE TO DO THE MIND-SHIFT
- → QUITE A BIT OF WORK TO ADAPT SERVICES TO RUN THAT WAY
- → DATABASES ARE AS USUAL A TOUGH CUSTOMER
- → ADDITIONAL INFRA REQUIRED FOR FASTER DEPLOYMENTS

DEVELOPERS LOVE IT

- → FINALLY "IT WORKS ON MY LAPTOP" IS A VALID STATEMENT
- → NO MORE GOING NUTS AFTER INCONSISTENCY BETWEEN ENVIRONMENTS
- → EASIER TO DO INTEGRATION TESTS
- → HAVE AS MANY DIFFERENT ENVIRONMENT AS YOUR MACHINE CAN RUN

CI AND RELEASES

- → CONTINUOUS IMAGES^W INTEGRATION
- → TEST YOUR OS
- → ON BARE METAL OR EC2
- → ONE SINGLE PROCESS TO RELEASE THE ALL
